

With eFreight360 Episcale is revolutionizing the classic documentation tool - paper - with cutting-edge digital XML technology that automatically captures and communicates all air freight shipping documentation, and forever eliminates the frustration, expense and insecurity of paper.

## Product Overview

eFreight360 is a Software as a Service (SaaS) cloud solution that runs on multiple devices, employs military level security, and is fully aligned with the IATA e-Freight standard. Any document managed by eFreight360 carries a PDF receipt and can be printed at any time if absolutely required. eFreight360 gives users the ability to look up routes and evaluate multiple quote alternatives to increase their profits. eFreight360's Integration Agent (EFIA) capabilities enable customers to easily integrate ePouch XML data into their current enterprise systems, and encourage paperless XML communication with shippers.

### Lower Costs

Even if you are partially or fully deployed, efreight360 is still right for you. Our current customers report savings of at least \$5.00 per paper transaction replaced with SmartForms. Start-Up costs are minimal, and all you need is a user ID and password to get started.

### #SmartForms Technology

eFreight360 uses SmartForms® technology. A SmartForm makes data capture easy, accurate and secure. SmartForms can be deployed on the cloud allowing their easy completion by any authorized person, anytime, anywhere, using any device, on or off-line.

### Secure and Reliable

SmartForms can be easily printed at any point in the process. Digital 'Documents of Record' remain instantly retrievable or saved for as long as they are required. eFreight360 provides a stunning new standard never before available in support of the IATA e-Freight initiative.

eFreight360 starts with the AWB booking process. The system offers multiple methods of booking and confirming cargo space with any carrier or circumstance and automatically leverages data to create the digital ePouch.

- **For booking with most Carriers**

eFreight360 offers customers our standard messaging capability to communicate and leverage booking and confirmation information entirely inside of eFreight360.

- Once that process is completed, eFreight360 leverages that booking data directly into the digital XML ePouch. This method easily replaces older booking processes like phone calls, unstructured emails, fax and others. No unreliable and expensive scanning or OCR processes are required.

- **For booking with proprietary Carrier systems**

- When necessary, eFreight360 supports the booking AWB process via airline and other proprietary systems outside of eFreight360. In such cases, eFreight360 provides Integration Agents that are installed within the customer's firewalled networks to securely hoist data to eFreight360 SaaS for the production of the ePouch.
